GitHub prototype page

- Application fact sheet

To use the web application, you should first choose a login, as this is a minimum viable product the login is limited to two options, by clicking on one you are brought via hyperlink to their respected appointment management page. You then are given the option to Create, Edit, View Details and Delete an appoint of your choice.

Create and Edit require the user to input text via a textbox and select a date by either typing it in the correct format or using a popup modal to select from a calendar.

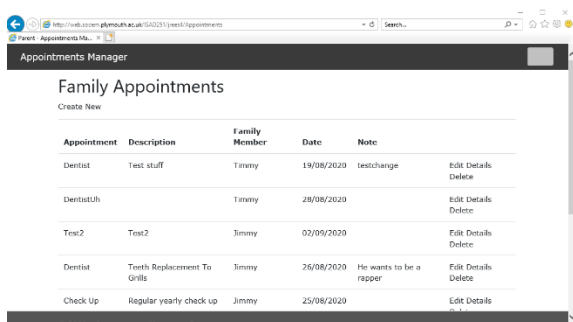

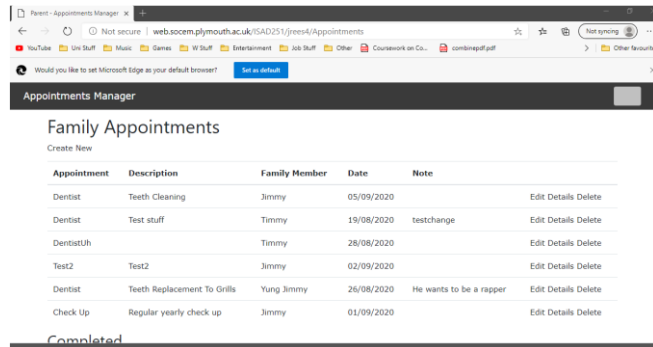

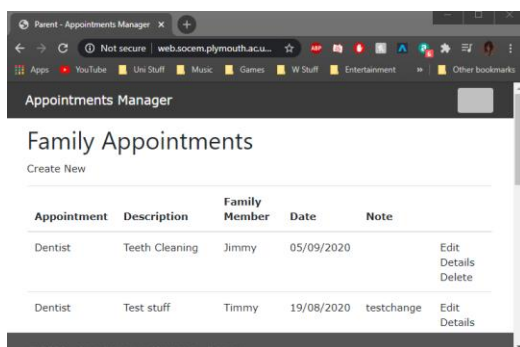

The Parent's page has a table of complete, and a table of uncompleted appointments, both have the addition of a notes feature.

The Child page can only see upcoming appointments but is still given the option to complete the appointment via the edit function. The note feature is completely hidden from their page, as they have no interaction or need to create them.

GitHub prototype page

Key Features

- A minimizable navigation bar
 - A quick home button that's always visible on the navbar, can be replaced by brand name in future iterations.
 - Easy appointment management
 - Adult note-based system that children can't see
 - Easy check box completion system
- Evidence of testing on more than one browser

Tested with;
Google Chrome

Microsoft Edge

Internet Explorer

ACT Rules - Language and Title of the html

```
<title>Login Page - Appointments Manager</title>
```

```
<html lang="en">
```

Development TIPS with WAI

Label every input -

Describe any images - No images are used so its not necessary, however you can use labels.

Language declaration in header -

Help avoid input mistakes -

Reading order in code -

Appointment

Dentist

Description

Teeth Cleaning

```
<!DOCTYPE html>
<html lang="en" == $0
<head>_</head>
```

Date

dd/mm/yyyy

Adaptable screen sizes/ different browsers or devices. –

This is done by using a GRID w3 system, which is based on % rather than exact pixels.

```
<body>
  <header>_</header>
  <div class="container">
    <main role="main" class="pb-3">
      <h1>Create</h1>
      <h4>Appointments</h4>
      <hr>
      <div class="row">
        <div class="col-md-4">
          <form action="/ISAD051/frees4/Appointments/Create"
            method="post" novalidate="novalidate">
            <div class="form-group">_</div>
            <div class="form-group">_</div>
            <div class="form-group">_</div>
            <div class="form-group">_</div>
            <div class="form-group form-check">_</div>
            <div class="form-group">_</div>
```

Appointment

The Appointment field is required.

Description

Family Member

The Family Member field is required.

Date

dd/mm/yyyy

The Date field is required.

Note
